INSTITUTIONAL BENEFITS OF ESTABLISHING A G CELL:

An unbiased counseling and mentoring service for your students interested to study internationally, provided by Education Matters our official study abroad counseling partner.

A platform supported by national and international governments for academic conversations and collaborations with the International Higher Education sector.

A platform to share knowledge, leading to capacity building in the higher education sector.

An opportunity to showcase your institutions and your students' achievement at a global platform.

INSTITUTIONAL BENEFITS OF ESTABLISHING A G CELL:

Study abroad support services assist Indian higher education institutions with accreditations and ranking.

Increased demand among Indians to study abroad, calls for enhanced mentoring support for fresh graduates. Such mentoring service must start in the pre-final year and assist with profile building, and support to access necessary funds, apart from the standard study abroad support services.

Global Education Cells will work alongside the placement cells, Entrepreneurship cells, and innovation cells to ensure enhanced outcomes among Indian graduates.

It's estimated that 1.8 million Indians will be spending US \$85 billion on education overseas by 2024. Fresh graduates must start early and in a systematic manner to access better admissions, that best fit their profile.

A structured study-abroad support system on campus will lead to increased interaction with global universities and this will assist with academic and research partnerships.
